MOHAMMED RASHIL K

Data Analyst · AI Engineer · Web3 & Blockchain Analytics
Mail id :rashilk724@gmail.com | +91 9778338574 | Bengaluru, India | Indian National | Open to UAE / GCC Relocation
LinkedIn : Mohammed Rashil | GitHub: github.com/rashilk

PROFESSIONAL SUMMARY

Data Analyst and AI Engineer with professional experience delivering analytics pipelines, machine learning models, and Generative AI solutions across Web3 and enterprise environments. Proficient in Python, SQL, and PostgreSQL for end-to-end data workflows — from raw ingestion to executive dashboards. Hands-on builder of blockchain analytics systems, smart contract integrations, and RAG-based AI applications using LangChain and LLM inference. Combines strong analytical foundations with modern AI and Web3 engineering skills, bringing a rare cross-disciplinary profile to data-driven organizations in the UAE and GCC market.

CORE COMPETENCIES

◆ Data Analysis ◆ SQL Query Optimization ◆ Exploratory Data Analysis (EDA) ◆ Predictive Analytics
◆ Machine Learning ◆ Generative AI ◆ RAG Architecture ◆ Business Intelligence
◆ Blockchain Analytics ◆ Web3 Applications ◆ Dashboard Development ◆ Data Visualization
◆ Statistical Analysis ◆ Automation Scripting ◆ REST APIs ◆ Full-Stack Development

TECHNICAL SKILLS

Programming Languages: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, PostgreSQL
Data & Analytics: Exploratory Data Analysis, Feature Engineering, Statistical Modeling, ETL Pipelines, Predictive Analytics
Machine Learning: Scikit-learn, TensorFlow, PyTorch, Keras — Classification, Regression, Clustering, Ensemble Methods
AI & Generative AI: LangChain, RAG Architecture, Vector Search, FastEmbed, LLM Inference, Prompt Engineering
Web3 & Blockchain: Solidity, ethers.js, Smart Contract Integration, Blockchain Transaction Monitoring, Polygon Network
Development & Tools: FastAPI, React, REST APIs, Git, Jupyter Notebook, Google Colab, VS Code, Automation Scripting
Visualization & BI: Power BI, Streamlit, Matplotlib, Seaborn — Interactive Dashboards & Business Reporting

PROFESSIONAL EXPERIENCE

Data Analyst & Programmer | Web-3 Technologies Pvt Ltd Wayanad, Kerala *Feb 2026 – Present*

– Engineered end-to-end analytics pipelines using Python (Pandas, NumPy) and PostgreSQL, processing multi-source operational datasets and delivering dashboards that accelerated management decision-making.
– Built a blockchain transaction monitoring system for a Web3 gaming platform, capturing and analysing on-chain user activity across Polygon Amoy testnet, enabling real-time behaviour analytics and reporting.
– Designed and deployed the Genius Reward System — a production-level decentralised student incentive platform using Solidity smart contracts, ethers.js, React, and FastAPI — from architecture through live deployment.
– Developed RESTful API services with FastAPI and React-based frontends, delivering full-stack automation workflows that eliminated manual data processing tasks for internal operations teams.
– Optimised complex SQL queries for data extraction, transformation, and reporting pipelines; maintained PostgreSQL schemas ensuring data consistency and integrity across all analytics workflows.
– Translated raw platform metrics into structured business intelligence reports and Streamlit visualisations, providing stakeholders with clear, data-backed performance insights.

Data Science Intern | Rubixe AI , Bengaluru *2025 – 2026*

– Performed comprehensive EDA and statistical analysis on real-world structured datasets, uncovering actionable business patterns and contributing directly to client-facing analytical deliverables.
– Built end-to-end ML pipelines covering data preprocessing, feature engineering, model training, hyperparameter tuning, and evaluation reporting — delivering measurable improvements in model accuracy and F1-score.
– Developed and benchmarked classification and regression models (Logistic Regression, Random Forest, Gradient Boosting) using Scikit-learn, selecting optimal models based on rigorous evaluation metrics.
– Trained deep learning models for image classification using TensorFlow and PyTorch, applying CNN architectures and transfer learning techniques to achieve competitive benchmark performance.
– Partnered with senior data scientists to convert business requirements into structured ML solutions; produced clear documentation covering all model decisions, assumptions, and results.

KEY PROJECTS

Genius Reward System — Decentralised Blockchain Incentive Platform *Solidity | ethers.js | React | FastAPI | Polygon Amoy | PostgreSQL*

– Architected and deployed a production-level decentralised student rewards platform on Polygon Amoy testnet, integrating Solidity smart contracts with a React frontend and FastAPI analytics backend.
– Implemented on-chain reward distribution logic, user transaction tracking, and a PostgreSQL-backed analytics layer — delivering a tamper-proof, fully auditable incentive system with real-world applicability.
– Served as sole full-stack developer and blockchain engineer on this project, demonstrating end-to-end delivery across Web3, backend, frontend, and data layers.

Multi-Modal RAG System — Intelligent Document Q&A Assistant *Python | LangChain | FastEmbed | Vector Search | OCR | Streamlit*

– Designed a Retrieval-Augmented Generation (RAG) pipeline processing unstructured documents via OCR extraction, semantic chunking, and vector embeddings — enabling precise natural language Q&A over document collections.
– Orchestrated LLM inference with LangChain and FastEmbed vector search, achieving context-aware, hallucination-reduced responses — demonstrating practical Generative AI engineering capability.
– Delivered an interactive Streamlit application enabling non-technical users to query complex documents instantly, reducing manual document review time significantly.

Bank Marketing Analytics — Predictive Conversion Modelling *Python | Pandas | Scikit-learn | Seaborn | Power BI*

– Analysed a 45,000+ row bank marketing dataset to identify behavioural drivers of customer subscription, applying EDA and feature engineering to extract high-impact predictive signals.
– Compared Logistic Regression, Random Forest, and Gradient Boosting classifiers, achieving ~85% prediction accuracy; delivered executive-ready Power BI dashboards and a strategic recommendation report.

Skin Disorder Prediction — Clinical Decision Support System *Python | Scikit-learn | Pandas | Streamlit*

– Built a clinical ML classification system predicting skin disorders from patient features, covering complete pipeline from data cleaning and feature selection to model evaluation and deployment.
– Deployed a Streamlit interface providing healthcare professionals with interpretable, feature-based predictions — demonstrating applied ML in a high-impact domain.

EDUCATION

Bachelor of Computer Applications (BCA) *2022 – 2025*

Bharathiar University, Tamil Nadu | CGPA: 6.9 / 10

Relevant Coursework: Data Structures, DBMS, Statistics, Operating Systems, Software Engineering

CERTIFICATIONS

IBM Data Science Professional Certificate — IBM / Coursera
Data Science Program (8 Months) — DataMites Institute, Bengaluru
AI Builders Lab — Google for Developers & AccelerateX

ADDITIONAL INFORMATION

Visa Status: Indian National — Requires Employment Visa (UAE / GCC) **Languages:** English (Professional), Malayalam (Native), Hindi (Conversational)
Availability: Immediately available — ready to relocate to UAE / GCC upon offer
